Reviews

Most of these ebook is the perfect publication offered. Sure, it really is play, still an interesting and amazing literature. You wont truly feel monotony at whenever you want of your time (that's what catalogs are for about in the event you check with me).

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 48 pages. Original publisher: Reston, Va. : U. S. Dept. of the Interior, U. S. Geological Survey, 2006. OCLC Number: (OCoLC)122509189 Subject: Floods -- Navajo Nation, Arizona, New Mexico and Utah. Excerpt: . . . Summary 9 Climatic Characteristics in this report. The following sections Summary present examples of the above procedures. Estimates of the magnitude and frequency of peak discharge at ungaged sites are necessary for reliable flood-hazard mapping in the Navajo Nation in Arizona, Utah, Colorado, and New Mexico. An estimate of peak discharge with a recurrence interval of 100 years is required for an ungaged site in region 8 that has a drainage area of 523 mi² and Navajo Nation requested that the U. S. Geological Survey estimate peak discharge for a 100-year recurrence interval. The Bureau of Indian Affairs, U. S. Army Corps of Engineers, 100 years is required for an ungaged site in region 8 that has a drainage area of 523 mi², average basin slope of 0.2422, in per-unit-area estimates of peak discharge magnitude for gaging stations, and a mean basin elevation of 6,940 ft. Using the equations in the region and update regional equations for estimation in table 2, the peak discharge for a 100-year recurrence interval of peak discharge and frequency at ungaged sites. is: Equations were developed for estimating the magnitude of peak discharges for recurrence intervals of 2, 5, 10, 25, 50, 100, 120, 265, 477-2, 25 (1.53 x 10⁴) (523) (0.2422) (6,940) and 500 years at ungaged sites using data collected through 1999 at 146 gaging stations, an additional 13 years of peak-discharge data since the 1997 investigation (gaging-station data Ungaged Site...
