It is well to remember, in this connection, that no inconsiderable part of the science of to-day is in a similar empirical status. I need only to mention the sun-spot cycle, or cycles of which there are two or three, more or less fully established, and which depend wholly upon observation. Regarding the underlying causes, we perhaps know as little as the Babylonians did of the nature of comets. The numerous attempts which arc still made to fit the various phenomena of the weather into some such orderly scheme are not all confined to the ranks of the ignorant and mentally unbalanced. The second writer alluded to, viz., Seneca, makes, what was for his time, this remarkable statement: Why should we be surprised that comets, phenomena so seldom presented to the world, are for us not yet submitted to fixed laws, and that it is still unknown from whence come and where remain these bodies whose return takes place only at immense intervals? Fifteen centuries have not elapsed since Greece counted the stars by their names. How many people at the present day know nothing of the heavens except their aspect, and can not tell why the moon is eclipsed and covered with darkness! We ourselves in this matter have but lately attained to certainty. An nge...
